Code, query, support runbook

Smart Contract Developer

Writes the on-chain logic for dApps.

On-Chain Data Analyst

Uses tools like Dune to analyze blockchain data.

Community Manager

Manages the Discord and acts as the heart of the project.

Technical output: contract and failure-case tests

Actual quiz result · Practice task is an example

Smart Contract Developer

Writes the on-chain logic for dApps.

Proposed practice output

Local deposit/withdrawal contract
Unauthorized-caller test
Repeat-withdrawal test
README test command

Measure transaction senders, not people

Actual quiz result · Practice task is an example

On-Chain Data Analyst

Uses tools like Dune to analyze blockchain data.

Proposed practice output

Count distinct tx.from addresses per UTC day
One DEX over 30 days
Deliver SQL, chain and contract filters, and a chart
Repeat swaps count once per address/day; label transaction senders, not users

Community output: an actionable support handoff

Actual quiz result · Practice task is an example

Community Manager

Manages the Discord and acts as the heart of the project.

Proposed practice output

Issue: wallet will not connect
Category: connection
Owner: support moderator
Collect browser, wallet version and error text
Output: queue and handoff note

The Analyst also recommends security auditing

Actual quiz result · Practice task is an example

Smart Contract Auditor

Finds security vulnerabilities in smart contracts.

Proposed practice output

Affected function
Failing test
Proposed fix

The Analyst: three role matches

On-Chain Data Analyst

Uses tools like Dune to analyze blockchain data.

Smart Contract Auditor

Finds security vulnerabilities in smart contracts.

Quantitative Analyst

Models the financial risks of DeFi protocols.
